PICOT Question
— Population/Problem: Male and female patients (65 years and older); Admitted to intensive care unit without a pressure ulcer; Hospital acquired pressure ulcer.
— Intervention: Braden Scale for risk assessment; multicomponent (three or more components) intervention strategy or protocol.
— Comparison: Normal care or comparison treatment reported in study.
— Outcome: Accuracy of risk assessment, effectiveness of the hospital intervention protocol, quality of care, cost reduction, incident and/or prevalence.
— Type/Time: Systematic review of research studies (systematic reviews, experimental, quasi-experimental, observational, qualitative); Published between January 1, 2012 until December 31, 2018.
